

Claims

- [c1] A system for facilitating transactions among travel service suppliers and travel service buyers, the system comprising:
- an integrated travel network;
 - at least one Global Distribution System connected to the network;
 - a travel broker database connected to the network, wherein the travel broker database is configured for access by the travel service suppliers and the travel service buyers;
 - a travel history database connected to the network, wherein the travel history database is configured to store information about the transactions; and
 - at least one point of service terminal connected to the network, wherein the point of service terminal is configured to access the broker database and the travel history database.
